MyPHC Report

Revitalizing health systems for
effective service delivery

2024

Orodata Science¹⁰

Orodata Science and Civic Tech for over 10 years, has combined data science, technology, design, and research to improve institutional reforms, foster media innovation, bolster health systems, and facilitate access to inclusive and rich data.

Our vision is to empower people, institutions, and organizations at different levels with knowledge and information that leads to the development of solutions that impact the lives of millions.

Our focus areas include; Reinforcing Health Systems, Enabling Community Media, Ensuring Accurate and Inclusive Data, AI Accountability, and Supporting Institutional Reforms.

Executive Summary

This report highlights the critical condition of Nigeria's Primary Health Centers (PHCs) and calls for urgent intervention from the government, NGOs, and health institutions. Our investigation spanned 6 States, revealing severe deficiencies in the healthcare system, which operates on outdated data.

The Nigerian healthcare system is deteriorating, with PHCs showing significant infrastructural and operational weaknesses. Half of the PHCs suffer from at least four major building failures. Additionally, 25% have not received recent upgrades, struggling with inadequate water, electricity, and sewage systems.

28% of PHCs lack access to clean water, relying on unsafe sources. There is a severe shortage of medical staff, with very few doctors or medical officers, pharmacy technicians, and health assistants.

Although there are many Community Health Extension Workers (CHEWs), Community Health Officers (CHOs), and nurses, their numbers are still insufficient. Only 23% of PHCs report satisfaction with work conditions, and there is a 24% gap between deployed and active staff, contributing to poor care and low morale.

Only 36% of patients find PHCs affordable. Overall, 49% of PHCs are rated as good and effective. The report calls on the government and health institutions to address the urgent need for improvements in PHC facilities. This includes updating databases, enhancing staff welfare, training health workers, and effectively managing resources to ensure reliable healthcare services.

We extend our gratitude to African Data Hub for their support.

For more details, please visit <https://checkmyphc.org/>

"28% of PHCs lack access to clean water, relying on unsafe sources..."

Research Findings

Extensive research was done by the Orodata research team and data analysis was carried out on the datasets obtained from the Primary health centres (PHCs) surveyed across six states. Below are the key findings across 345 PHCs in Nigeria.

Structural Issues Identified: 50% of PHCs have at least 4 of 7 building failures, and 25% of PHCs have had no renovations.

Facility Conditions Overview: 57% of PHCs have clean restrooms, and 85% of PHCs waste is burnt or thrown in a pit. 68% of PHCs rely on boreholes/wells for water, 45% of PHCs have PHCN power, and 34% of PHCs have no power supply. 9% of PHCs have ambulances, while 50% of PHCs face at least 7 medical supply shortages.

Staffing and Training: There is a 24% disparity rate in assigned health workers to active health workers. .

Only 23% of PHCs are satisfied with work conditions, and 50% of PHCs have received training from at least one of the identified institutions

31% of PHCs have had no recruitment while 23% of the PHCs had not received in recent times.

Usage and Ratings: PHCs have an average daily usage of 14 patients per PHC, with an average of 430 communities per state utilizing these centres. 36% of patients can afford the treatment charges. The general rating of PHCs shows 49% excellent to good and 51% poor to very poor.

All these factors critically affect facility, infrastructure, hygiene, safety, service delivery, emergency response capabilities, staffing issues, low morale, and a need for better support and development for healthcare workers.

"Only 9% of PHCs have ambulances, while 50% of PHCs face at least 7 medical supply shortages..."

Definition of Terms

Affordability rate: Patients ability to afford treatment fees

Disparity rate: The difference between the assigned medical personnel and the active personnel.

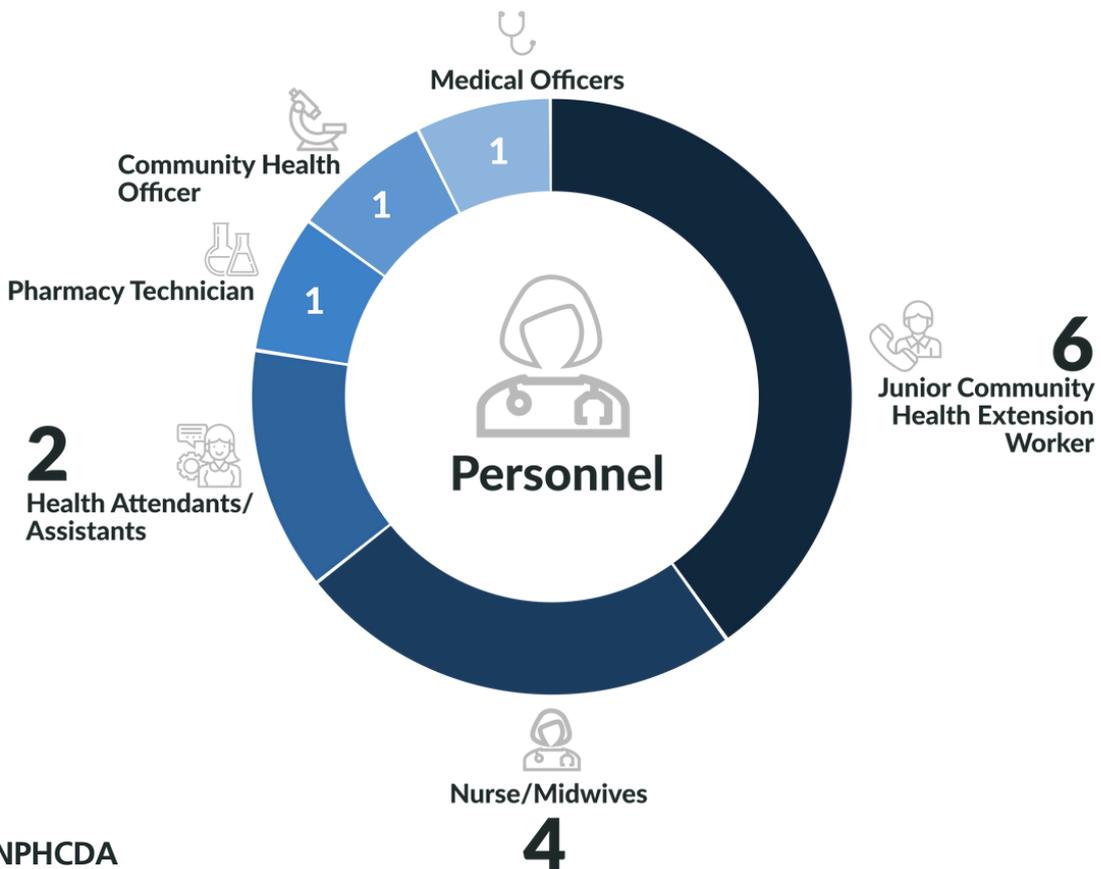

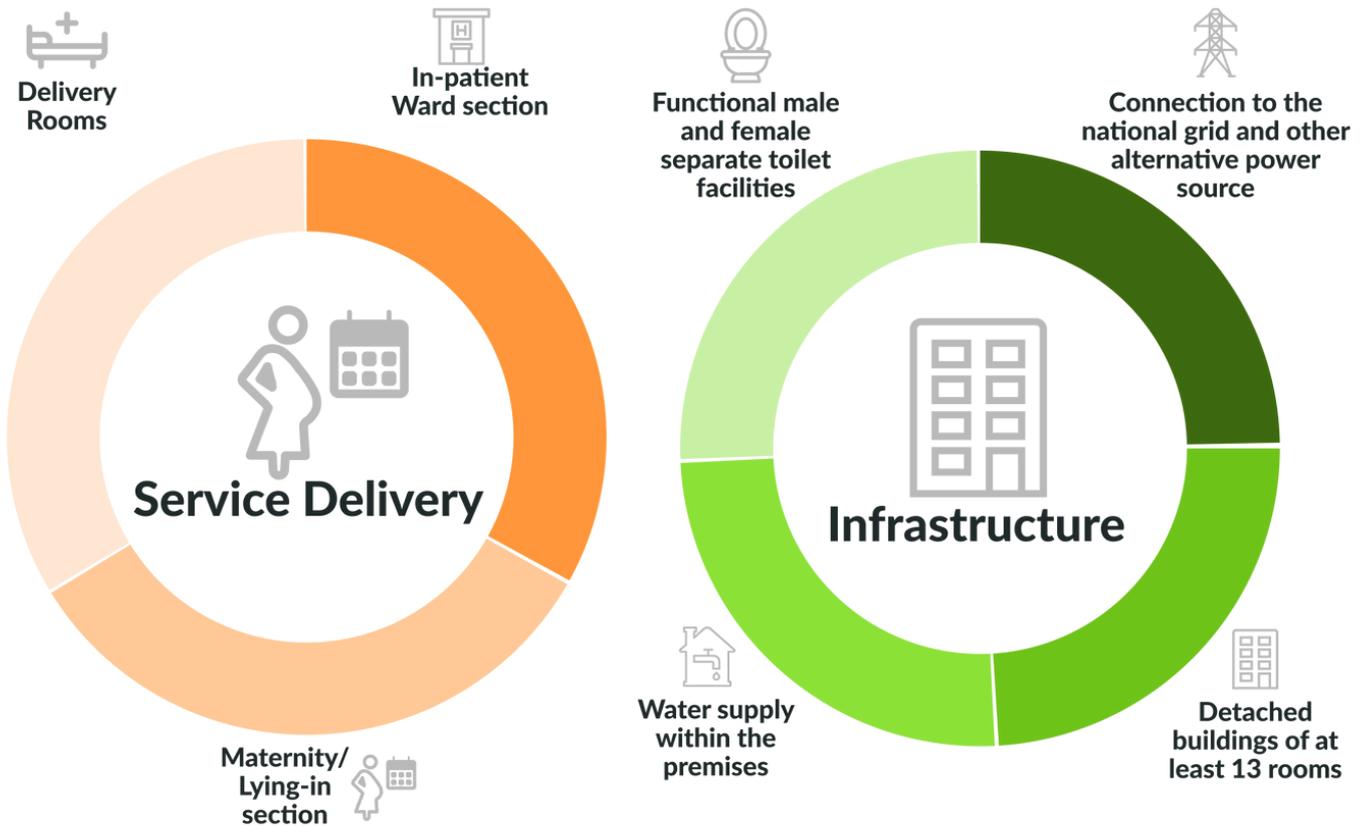

Identified Building Failure: Damaged Doors, Chairs, Hospital Beds, Tables, Windows, Medical Records and Leaking roofs.

Identified Labor ward Equipment: Bed Pan, Delivery Bed, Fetal Heart Rate Monitor, Infusion Pumps, Neo-Natal Resuscitation Equipment, and Others.

Identified Medical Supplies: Oxygen Gas for Patient, Stretcher, Syringes, Bandages, Gloves Personal Protective Equipment, Injection Ample, GV Ink, Scissors, Methylated Spirit, Disinfectant, Medications, Blood Pressure Apparatus, Weighing Scale, Thermometer, Drip, Working Fridge for Vaccine, Drip Stand, Drip Stretcher, Other Medications and equipments

Facility Conditions Overview

57% of PHCs have clean restrooms

84% of PHCs have 1-5 consulting rooms

85% of PHCs waste is burnt or thrown in a pit

68% of PHCs rely on boreholes/wells for water

45% of PHCs have PHCN power

34% of PHCs have no power supply

Means of transportation (Majority/Top three)

9% of PHCs have ambulances

50% of PHCs face at least 7 medical supply shortages

Usage and Ratings

36% of patients can afford treatment

81% of PHCs are rated good to excellent for Immunization services

19% of PHCs are rated poor to very poor for Immunization services

49% of PHCs have a General Rating within good to excellent

51% of PHCs have a General Rating within poor to very poor

Recommendations

Towards an improved health system, we recommend;

Improve Infrastructure: Address structural issues and upgrade facilities to ensure safe, reliable healthcare. Also, Invest in building and maintaining robust healthcare facilities.

Enhance Supply Chain: Ensure consistent supply of necessary medical resources and proper waste disposal systems.

Increase Patient Trust: Improve care quality to build patient confidence and improve health outcomes.

Boost Staffing: Hire more medical staff to meet minimum standards.

Enhance Work Conditions: Improve work environments to increase morale and efficiency.

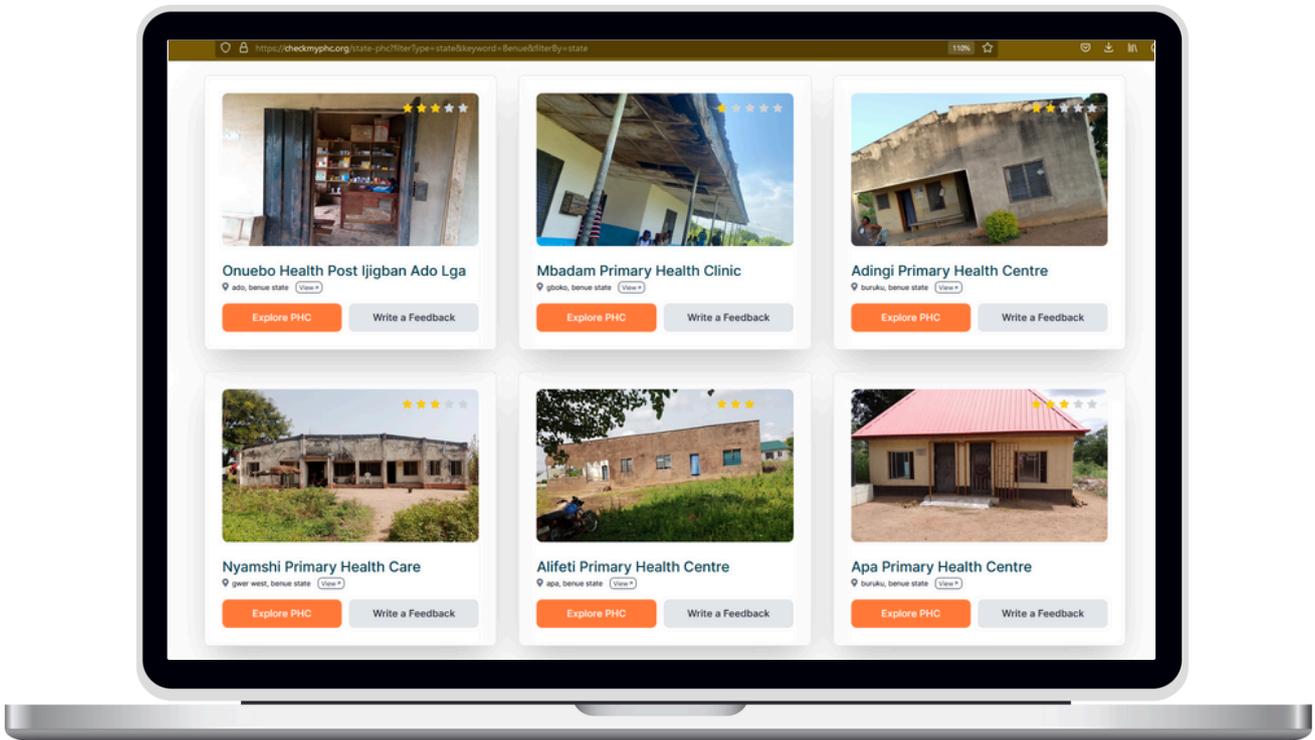

Regular Training: Provide ongoing training to keep healthcare workers skilled and motivated.

Resource Allocation: Ensure efficient distribution of resources for optimal healthcare delivery.

Systemic Improvements and database updates: Implement policies for consistent staff training, support, welfare enhancement, effective feedback system and database updates to maintain a robust healthcare system, database and resource allocation.
